

Trend Micro™

Security as a Service

Cloud-based security is a great choice to support your business with fast delivery, low maintenance, and—most importantly—immediate, effective protection. With security delivered from the cloud, you eliminate the cost and hassle of provisioning, managing, and scaling security hardware and software. And you ensure fast, consistent delivery of the newest security technologies and updates, helping you stay compliant and reduce risk.

When it comes to securing anything from your endpoints to your email or data center, Trend Micro™ Security as a Service is the right fit for any organization. Whether you are a small one-room business or a large enterprise with offices around the world, you'll save big with our high-availability solutions that are always up to date. As experts in security and cloud services, we keep your data safe while making your life easy and reducing costs. And we'll deliver peace of mind. We'll host the hardware in our certified data centers, maintain the software, and protect your data—keeping your security smart and simple.

SECURITY
as a Service

Using Security as a Service to Protect Your Business

A cloud-based approach gives you the option to deploy our protection through a Software as a Service (SaaS) model, allowing you to spend less time and resources on security and focus more on your core business.

Fast Delivery

With Trend Micro Security as a Service solutions, we remove the hassle of provisioning and scaling security. We host the hardware and software for you in our data centers, giving you instant access to security with minimal set up.

Low Maintenance

We'll keep your security up to date for you with the latest protection—you have no product updates to administer and no pattern file updates to push out. Plus easy Internet controls provide simple management.

Accelerated Productivity

Reducing security deployment and maintenance efforts leaves you more time to implement critical projects in other areas of your company. You'll stay compliant, reduce risk, and secure your devices and data without compromising employee productivity.

High Availability

Cloud-based security is only as good as the infrastructure behind it. With Trend Micro, your security is always ready to protect you, backed by our expert staff, proven processes, and highly available, fully redundant, geographically distributed data centers.

Lower Costs

By deploying Security as a Service solutions, you save on infrastructure and administration time. And threats are stopped in the cloud before they reach your network, which prevents costly breaches and business disruption.

Immediate Protection

Our worldwide team of security experts continuously updates our Security as a Service solutions 24x7. Instantly delivered through the cloud, these updates give you immediate protection.

Security that Fits

Whether you are a small businesses with no dedicated IT staff or a large enterprise with remote workers and branch offices around the world, our cloud-based solutions will deliver the protection and flexibility you need. It's security that's smart, consistent, easy to deploy, and always up to date.

Regardless of the size or expertise of your IT department, investing less infrastructure, time, and money in managing your security means more resources to support your business.

Trend Micro Security as a Service Solutions

○ Trend Micro™ Hosted Email Security

is no-maintenance Software as a Service (SaaS) email security that delivers continuously updated protection to stop spam and viruses before they reach your network.

○ Trend Micro™ Hosted Email Encryption

is an identity-based encryption add-on service for Hosted Email Security that keeps your email confidential, simplifies compliance, and reduces management costs.

○ Trend Micro™ Worry-Free Business Security Services

is SaaS security that protects PCs, laptops, servers, and other Windows-based devices such as point-of-sale machines and tablets, using continuous cloud-based updates to protect your business data anytime, anywhere.

○ Trend Micro™ Deep Security as a Service

is security for cloud-based Windows and Linux servers with antivirus, intrusion prevention, firewall, web reputation, and integrity monitoring so you can safely use the cloud to support your business.

○ Trend Micro™ SecureCloud

encryption is protection that lets you control data confidentiality in your public and private clouds using simplified key management.

Why Trend Micro is the Best Choice for Security as a Service

Simply put, you can rely on the experts. Trend Micro is a global leader in Internet content security and threat management and we are 100% dedicated to security. Starting early in the cloud revolution in 2008, we pioneered cloud-based global threat intelligence with our [Trend Micro™ Smart Protection Network™](#) infrastructure. We correlate big data from around the globe to deliver smart protection against theft and loss with real-time cloud updates.

- We collect more threat data from a broad, robust global sensor network to ensure customers are protected from the volume and variety of threats today.
- We identify new threats faster using finely tuned custom data mining tools to root out new threats within large data streams.
- We protect through a proven cloud-based infrastructure that provides the fastest possible protection against new threats.

Because our Security as a Service solutions are powered by our Smart Protection Network you benefit from our long history and deep expertise in security and cloud services. Based on these innovative technologies, we deliver solutions that fit both your evolving IT ecosystem and your evolving security needs. You can trust Trend Micro to handle security while you focus on your business.
